### **Задание 2.1.3.**

**Прочитай текст. Расспроси своего друга о его рабочем дне.**

My working day.

I usually start my day with getting up and doing all things that everybody does in the morning: washing, having breakfast, etc. Also, I got used to gather my learning tools: pencils, exercise-books, text-books in the morning. Then I usually go to the college. Fortunately, father takes a car every morning and he often picks me up and drives me to the doors of our university building.

And soon the lectures and lessons begin... We have from 2 to 4 lectures every time, depending on day. I like studying in the college more than in the school because in college it is mostly allowed to miss some lectures (of course, later you should take a summary from your mate and copy it). So, a student is much more free, than pupil is.

After the lessons I usually return home where I have dinner and start thinking about my ways of spending the rest of the day. Very often I go to my friend's places. During the early autumn and summer I often go to the sports ground or on the beach. I also like visiting different sports events. So, the world is full of enjoyable things to do.

On returning home I usually start doing my homework (perhaps, it is the most dull part of the day). Having finished it, I open a book and read it or watch TV. At last, I go to the bed. Of course, I would like to tell you more about myself and my working day, but, unfortunately, my time is rather limited and I have got a lot of homework to do. Generally, now you know about my working day enough.

#### **Reading Newspapers and Magazines**

Newspapers and magazines play a very important in our life. There is no family that doesn't receive or buy one or two newspapers or magazines. All newspapers and magazines inform the public about events, analyse them, express public opinions. Of course, they have changed greatly during the recent years. I'd like to say a few words about the changes that have taken place in Russian press. In the 80s there were several central newspapers which expressed the official viewpoint on everything. All newspapers published the same views. The censorship was very strict. In the middle of the 80s the era of glasnost began. It influenced the press greatly. They started publishing problematic materials. The headlines were changed. The editors-in-chief were elected. There appeared a great number of new newspapers and magazines.

Nowadays there are many daily, weekly, monthly editions. We can subscribe to some newspapers, others we can only buy. There are also newspapers which are distributed free in streets by metro-stations or put into mail-boxes. Newspapers are issued by different companies, independent editorial boards and even individuals. A lot of people stop subscribing to newspapers. Some of them can't do it, because newspapers very expensive, some of them are afraid of getting

the stress reading newspapers and some people prefer watching TV and listening to radio. That is the cause of great competition among the newspapers. They organise all kinds of lotteries, prizes, tours and so on. A special question is that of financial support of the press. The newspapers are not supported by the state any more, so they have to look for sponsors and publish a lot of advertisements. If we take a usual newspaper we'll find an editorial on the front page which covers the most important events of the day. Then we can find news items, current events, different reports and interviews, some articles and reviews on culture. The last page is usually dedicated to sports events and TV programmes.

### **Задание 2.5.3**

Прочитай и ответь на вопросы.

1. Walk, don't drive. Vehicles are among the worst sources of air pollution. Walk short distances, ride a bicycle, or use public transport if it is available. Failing that, try to share a car.
2. Turn down the heating. Just by lowering the temperature in your house by 2C you can save a lot of energy. Switch off light bulbs when you are not in the room, and computers, TVs and stereos when you leave them overnight.
3. Use less water. Water the garden at night so most of your spray does not evaporate in the sun. Don't leave the tap running when you brush your teeth. Take showers, not baths. Wash the dishes by hand. Dry your clothes on a line, not in a machine that burns fuel.
4. Shop smart. Avoid products that are dangerous to the ozone layer. Look for ozone-friendly sprays and keep away from genetically modified foods. Buy from businesses that take an effort to protect the climate; boycott ones that don't, and let them know about it.
5. Recycle waste. Buy recycled paper. Recycle newspapers, cardboard, aluminium cans, glass jars and plastics.
6. Avoid packaging. There is a market in Switzerland where you can buy toothpaste not in a tube. You may not want to go this far, but it's not difficult to avoid products with unnecessary packaging. Take your own shopping bag to the supermarket, rather than using up countless flimsy plastic ones, or use boxes.
7. Initiate a climate-friendly workplace. Up to 80 per cent of all our waste is generated in the workplace. Set up a "green group" to monitor your company's approach to waste and recycling.
8. Vote for change. Use your vote to encourage green policies. Write to your elected representatives and ask them what they are doing to support the environment. Pressure for change can start in your street. Urge local politicians to clean up their act and make recycling centers more accessible.
9. Plant a tree. Trees are a great source of oxygen. Plant a tree in your garden. Failing that, avoid products made from new teak or mahogany. Carefully check the suppliers of garden furniture, and if you are not sure where they come from, don't buy anything.
10. Join the movement. Sign up with your favourite environmental group and send money or, even better, volunteer to help to clear up beaches and wasteland. Above all, do something.

#### **History of Railroad Formation.** George Stephenson

George Stephenson was born in Wylam, 9,3(15 km) miles west of Newcastle upon Tyne, in 1781. His parents were so poor that they could afford only one room in a cottage. One of his earliest tasks was to keep his younger brothers and sisters out of the way of the coal wagons which were dragged by horses along the wooden tramway in front of the cottage door.

After various jobs at collieries learning all he could about Newcomen's pumping engine, he became engine-wright at Killingworth Colliery in 1812. Among other things like cobbling shoes and dressmaking (to earn extra money), Stephenson learned to write, to read and do arithmetic. He learnt all in the evenings when he had finished his long day's work at the pit. He studied his engine carefully and gradually made improvements on it. His employers allowed him to alter the engine and even gave him money to build a new one and allowed other workmen at the colliery to help him. So he gradually learnt the way steam could work and he built his engines aided by his son Robert.

#### ***False or true? Correct the mistakes***

1. George Stephenson was born in the seventeenth century.
2. His parents were rich enough to live in cottage.
3. To earn extra money Stephenson could cobble shoes and make dress.

4. He learned to read, write and do arithmetic at a local school.
5. George Stephenson made improvements on engine. His son didn't find George's work interesting

### **TURKISH RAILWAYS**

Turkish State Railways (TCDD) is a corporation, which plays an important role in the development of the Turkish economy.

The history of the railways in Turkey began on 23 September 1856 when, by a decree of the Ottoman Sultan, a British company was awarded the privilege of constructing and operating a 130 km line between Izmir and Aydin. The corporation "National Railways" was

established in 1923, when the country became a republic. Today the length of the railway network is 10,361 km, including 8,430 km of main lines and 1,931 km of secondary lines.

In almost 150 years of their history, Turkish Railways have undergone a number of changes. The new strategy includes plans for upgrading the existing lines and stations, modernizing rolling stock. Much is done to create a positive image among the public and attract customers to the railways. As a part of a new strategy, TCDD has purchased and put into operation new, more comfortable passenger carriages such as:

- Fatih Expressi, new Pullman coaches of high comfort level, with aircraft-type seats, air-conditioning and a modern lighting system. Lunch is offered during the journey;
- new coaches designed for modern business travelers. They consist of three double-rooms, a sitting room, a toilet, a bath and an American bar, with the atmosphere of a first class hotel on wheels. Some facilities such as telephone, fax and data modem terminals are also available to passengers;
- special sleeping cars provide the passengers with a high level of comfort and everything to make him feel at home;
- restaurant cars with improved quality Turkish food uphold the railway tradition of hospitality.

### INDIA'S RAILWAY PROJECT

The first plans for constructing a railway line along the west coast of India were proposed in 1880s but they were not carried out because there were many problems with the technology of the day. A feeble attempt to extend the line from Bombay to Mangalore was made much later but between 1964 and 1986 only 100 km of track were laid down. In 1990 the Konkan Railway Corporation was formed to build the remaining 760 km within 5 years. The new railway linking Bombay with Mangalore was inaugurated in 1996. It is 1127 km shorter than the old route.

The reduction in distance enabled the Konkan Railway to cut down the journey time. Even if trains run at a maximum of only 100 km per hour, the journey time between Bombay and Mangalore will come down from 41 hours to 15 hours. Train speeds of 130 km per hour or 160 km per hour will provide timesavings that are even more spectacular. Besides it had been estimated that fuel saving of more than Rs2 billion was achieved.

About 11% of line is in tunnels. These tunnels are equipped with sensors to monitor air pollution, temperature and visibility. The ventilation system is activated automatically via the data obtained from the sensors. The exact position of a train within the tunnel is indicated on a panel in the traffic control room\* at the tunnel entrance. The Konkan Railway has the longest railway tunnel in India (its length is 6.5 km), the tallest viaduct in Asia (the 64 m – high). There are 2,134 bridges on the line.

#### TRANSPORT DIFFICULTIES IN MOSCOW IN THE 1920's AND 1930's

(1) In the 1920's the transport situation in Moscow was difficult. Indeed, very few buses were in operation in Moscow. Not many people had their own cars. There were no city railways. However, every year 150,000 suburban passengers used railway stations, and they needed an efficient system of city transport.

(2) In 1930, the trams handled 90 per cent of the passenger traffic in the capital, and they were overcrowded (переполненный). Besides, the system was often fully paralysed in winter because of heavy snowfalls.

(3) In order to perfect the city transport a project of building Metro in Moscow was proposed. According to this project the construction of the underground railways was to be initiated in 1932.

(4) Initially, the construction of the metro system went on slowly. The metro builders encountered many difficulties because they had no experience in building underground railways. But during the second year the work progressed more rapidly thanks to mechanical equipment which was used on a large scale. Most of this equipment was developed and produced in the USSR. Besides, the workers themselves became more experienced.

(5) Nowadays the advantages of the Moscow Metro are well known to everybody. Our Underground is the most beautiful and efficient transportation system compared with other subways abroad.

### Задание 3.2.3

Расскажи о метро как виде городского транспорта, используя вопросы как план.

- 1) What is the quickest means of city's transport?
- 2) Why is it necessary to construct Underground railways in large cities?
- 3) Why is the construction of underground railway system a very expensive and complicated engineering process?

- 4) What is the difference between the permanent way of underground railroads and ground-based railway tracks?
- 5) Why is there no ballast on the underground railways?
- 6) Are Metro trains powered by steam or electricity?
- 7) Where is the current obtained from?
- 8) What does the Underground carrying capacity depend on?
- 9) How many cities of the world have already built the Underground railways?
- 10) Where was the first underground railway line laid down?
- 11) What city has the largest subway system in the world?
- 12) What is the length of the metro line in Istanbul?

#### TRACK CONSTRUCTION

- (1) It is not an easy job to build a railway. The railway is built on a strip of land which is called the right-of-way (полоса отвода).
- (2) The right-of-way must be carefully prepared for laying down the tracks. At first, it must be cleared from trees, bushes and then graded (выравнивать) by special machines known as graders.
- (3) After the right-of-way is cleared and graded the permanent way is constructed. Ties and rails are laid upon the ballast foundation and the ballast is packed between the ties and on each side of the track to hold the ties in place.
- (4) The methods of railroad building have changed greatly in recent years. The greatest change has been the replacement of hand labour by machines, such as powerful bulldozers, huge excavators, scrapers, graders, etc.
- (5) The most modern method of railway construction is laying the track in pre-assembled (сборный) lengths, that is, the lengths of rails to which the sleepers are already attached. This work is carried out by a high-speed track-laying crane, a wonderful machine which lays pre-assembled lengths of track in a few minutes. One of the most efficient machines of this kind is the Platorv track-laying crane having an output of 900-1000 meters of track per hour.

**Время выполнения 20 минут.**

### Задание 3.4.3

Подготовьте сообщения на следующие темы, используя словосочетания, данные в скобках (каждое предложение начинайте с подлежащего).

#### **THE OPERATION OF TRAINS**

All railroads are divided into divisions in order to simplify the problem of running trains. A division may be of different length.

Each railway has two kinds of trains: regular trains and extra trains. A regular train is a «scheduled» train, a train listed on the railroad timetable. Regular trains have definite times for arrival and departure. All regular trains may be both freight and passenger ones. Passenger trains are subdivided into fast expresses which have long runs and make few stops and local trains which stop at all stations. Freight trains are used for carrying goods. Some freight trains make few stops during their runs and some freight trains stop at small stations to load and unload freight. «Extra» trains are not scheduled in the railroad timetable.

**Время на выполнение : 15 минут**

### **Задание 3.5.3**

Расскажи об организации движения поездов, используя вопросы как план.

1. What was the purpose of applying numerous devices to the operation of railways?
2. How was the problem of railway operation simplified?
3. How is a railroad division operated?
4. What is the difference between the regular trains and the extra trains?
5. What factors must be taken into account when making a time-table?
6. What jobs does the operating business include?
7. What is meant by the telecommunication service?
8. What two operations in the switching yard are simplified thanks to the radio?
9. What radio devices find application on the railways and what functions do they perform?
10. Why can the drivers on modern locomotives decrease or avoid the danger of train collisions?
11. How does the TV facilitate the work of the car inspector?

#### **THE RECONSTRUCTION OF THE KURSKY TERMINAL IN MOSCOW**

- (1) As is known, all the nine railway terminals in Moscow were erected many years ago. As they were unable to cope with the increased flow of passengers, some of them were reconstructed whereas others are to be rebuilt in the near future.
- (2) The Kursky terminal was the first to be reconstructed. While designing the new building the civil engineers and architects faced a lot of problems which were to be solved in order to make the terminal convenient for passengers and attractive. One of the most important tasks was to make it capable of servicing a great flow of passengers going to the Black Sea Coast. For this purpose the main hall was considerably expanded, and now it can accommodate up to 6,000 passengers.
- (3) The travelling public is provided with numerous conveniences: the information centre, the waiting-rooms, the restaurant, a large number of automatic baggage cells etc. There are enough ticket windows so that passengers can reserve tickets in a few minutes.
- (4) The station handles now about 40,000 long-distance passengers and 750,000 suburban passengers daily. The designers provided for different platforms to service suburban and long-distance passengers thus facilitating the problem of train operation.
- (5) Being finished with glass and aluminium, the new building of Kursky terminal is now regarded one of the most remarkable and modern buildings in Moscow.

### **Задание 3.5.3**

Расскажи о железнодорожном гражданском строительстве, используя вопросы как план.

1. What is the basic feature of a railway?
2. What other engineering structures are there at the railways?
3. Why must engineers and architects work together designing a railway building?
4. Why was the outward appearance of station buildings become more attractive?
5. What problem is involved in choosing the materials for finishes?
6. What factors determine the design of a station building?
7. What advantages does the application of prefabricated units provide?
8. Why is it Britain that some station buildings are severely criticized?
9. What can you say about the architectural design of the railway terminals in Moscow?

10. Which of them are particularly remarkable and why?

### **Задание 2.12.2 ( по выбору)**

It is widely known that education helps to form a personality and prepares for life.

In Russia everyone has the right to receive education guaranteed by the Constitution. This right is realized by the broad system of compulsory secondary education, vocational, specialized secondary and higher education, part-time education, correspondence course and also by scholarships and grants.

In Russia there is a nine-year compulsory education, but to enter a university one must study two years more. At the age of six or seven Russian children begin to attend primary school. But most of them have already learned letters in kindergartens, which are a part of primary education now. Primary and secondary schools together comprise eleven years of study. Every school has a core curriculum of Russian, Mathematics, Science, Physical Training. There is also a variety of elective subjects, which are taught at lyceums and gymnasiums.

After finishing secondary school, lyceum or gymnasium one can go on to higher education. All applicants must take competitive examinations or total state examinations in two or three subjects.

### **Задание 3.1.2** Прочитай и переведи текст со словарем

Турецкие государственные железные дороги –это корпорация, которая играет важную роль в развитии экономики турции.

История железных дорог Турции началась 23 сентября 1856, когда указом Оттомана Султана, Британской компании разрешили строительство и управление 130 км линией между Измиром и Аудином. Компания «Национальные железные дороги» была основана в 1923 году, когда страна стала республикой. Сегодня протяженность железнодорожной сети составляет 10 361 км, включая 8430 км магистралей и 1931 км второстепенных линий.

За 150 летнюю историю турецкие железные дороги претерпели значительные изменения. Планируется улучшить существующие линии станции, модернизировать подвижной состав. Много делается, чтобы создать позитивное отношение у народа и привлечь клиентов. Частью новой стратегии является введение в эксплуатацию более комфортабельных пассажирских вагонов таких как

- новых вагонов повышенной комфортности с сиденьями самолетного типа, кондиционированием и современной системой освещения. Во время поездки подается обед.
- новые вагоны бизнес класса. Они состоят из 3 спален, гостиной, ванной и туалетом, американским баром, с атмосферой первого класса отеля на колесах.

### Задание 3.2.2

Транспортные трудности в Москве 1920 -30 годах.

В 1920-х транспортная ситуация в Москве была трудной. В Москве было мало автобусов. Немного людей имели личные машины. Не было городских железных дорог. Однако, ежегодно 150000 пассажиров пользовались пригородными железными дорогами и им нужна была эффективная система городского транспорта.

В 1930-х трамваи осуществляли перевозку 90 % пассажиров столицы, и они были переполнены. Кроме того часто система была парализована из-за сильных снегопадов.

Для того чтобы улучшить транспортную систему был предложен проект строительства метро в Москве. Согласно этому проекту строительство метро должно было начаться в 1932 году.

Вначале строительство метро проходило медленно. Метростроители столкнулись со многими трудностями потому что у них не было опыта в строительстве подземных железных дорог. Но на второй год строительства работа стала продвигаться быстрее, благодаря широкому использованию нового оборудования.

Сегодня преимущества Московского метро хорошо известно каждому. Наше метро самая красивая и эффективная транспортная система

### **Задание 3.2.3**

- 1) The underground railway is the quickest, safest, most reliable and comfortable means of city transport.
- 2) Metro can solve the problems of carrying a great number of passengers within urban and suburban areas as well as the problems of traffic jams, air contamination and noise.
- 3) Subways are usually built under city streets, but in order to take shortcuts they often must pass under rivers.
- 4) . The sleepers are only 0.9m long. They are shorter than those of the railroad track which are 2.7m long. The sleepers of the normal track are laid upon ballast made of broken stone or other materials. The crossties of the underground railway are laid directly on concrete base.
5. If the ballast were made of slag, gravel, sand or even broken stone, the train would be followed by the dust clouds.
- 6) Metro trains are powered by steam or electricity
- 7) The current is obtained from the third rail.
- 8) The Underground carrying capacity depends on the number of coaches and the frequency of train running
- 9) Nowadays there are underground railways in 80 cities all over the world

3. George Westinghouse devised the method of stopping trains by compressed air.
4. The early brakes were unsatisfactory. They were hand-operated so they give way to the Westinghouse brakes.
5. Increasing number of trains made railways invent different methods of signaling.
6. Under CTC all train movement are governed from a central point where there is a large illuminated panel with a diagram of all of all the tracks in the controlled section
7. No engine driver would be able to read block signals easily at a speed of, say, 200 kph. Weather conditions can also prevent the driver from reading the wayside signals. Sometimes the drivers themselves are not careful enough.
8. The key to solve the problem of train operation has been found in the so-called semi-automatic driving of trains moving at top speed.

### **Задание 3.4.2**

#### **Строительство железнодорожного пути.**

Нелегко строить железную дорогу. Железная дорога строится на полосе отвода.

Полоса отвода должна быть тщательно подготовлена к укладке железнодорожного полотна. Сначала ее нужно очистить от деревьев и кустарников и разровнять грейдерами.

После того как полоса отвода очищена и выровнена строятся верхнее строение пути. На балласт укладываются шпалы и рельсы и балласт утрамбовывается между шпалами.

За последние годы методы строительства сильно изменились. Большим изменением стала замена ручного труда машинами такими как грейдеры, скреперы, экскаваторы.

Самый современный метод строительства заключается в укладке сборных рельсовых плетей. Эта работа выполняется при помощи высокоскоростного путеукладочного крана, который укладывает рельсовую плетть за несколько минут.

### **Задание 3.4.3**

1. The track is one of the basic features of a railway. It is also called the permanent way.

The permanent way consists of rails, ties, and ballast. The distance between the rails is called the gauge. The standard gauge in most countries is 1,435 mm while in Russia the railroads have a gauge of 1,524 mm. The place where the ends of the rails meet in the track is known as the rail joint. The rail joint has always been the weakest part of the track for nearly all the rails wear out first at the ends.

Some railroads have two or more tracks. In order to make the trains pass from one track to another the railroads have a switch which is a very important element of the track. The rails differ greatly in weight according to the kind of traffic which they have to carry when placed in the track. The largest and heaviest rails are laid in the main-line tracks for it is these tracks which carry the largest volume of traffic.

2. The ties, on most tracks were almost all of wood and in order to make them last longer they were treated with creosote. The ties are not laid upon the earth for the earth cannot support the track structure. They rest upon a bed of crushed rock or gravel, which is called ballast.

3. Ballast is a very important element of the track for it is the ballast which supports the track structure, holds the track in position and provides needed drainage.

### Задание 3.5.2

#### Организация движения.

Все железные дороги делятся на участки для упрощения организации движения. Участок может быть различной длины.

Железная дорога имеет два вида поездов: регулярные и спец поезда. Регулярный поезд ходит по расписанию. Регулярные поезда имеют определенное время отправки и прибытия. Все регулярные поезда. оут быть грузовыми или пассажирскими. Пассажирские поезда делятся на скорые, которые имеют длинный маршрут и небольшое количество остановок и местные, которые останавливаются на каждой станции. Грузовые поезда используются для перевозки грузов. Некоторые грузовые поезда имеют несколько остановок на всем протяжении маршрута для погрузки и разгрузки.

Спец. поезда не вносятся в расписание

### Задание 3.5.3

1. Accidents which took place on the railways in the early days made specialists devise a great number of systems and devices in order to ensure the safe operation of trains
2. Sections or divisions are operated just as a small railroad.
3. Regular trains are all numbered. An extra train is not scheduled in the time-table; special trains, work trains and wreck trains are examples of extra trains.
4. The fact is that the railways make up different time-tables for the summer and for the winter service and that the weekday time-table is not the same as that of

Saturday and Sunday. Besides, one should not forget that express trains and slow local trains have to run on the same tracks.

5. The operating business also includes the making of separate working programmes for locomotives and train crews, the planning of regular switching operations and so on.

#### **Задание 3.6.2**

Строительство Курского вокзала в Москве.

Как известно, все 9 железнодорожных вокзалов в Москве были построены много лет тому назад. Так как они стали неспособны справиться с возрастающим потоком пассажиров, многие из них были перестроены, другие же будут перестроены в ближайшем будущем.

Курский вокзал был первым из перестроенных. Проектируя новое здание, гражданские инженеры столкнулись со многими проблемами, которые нужно было решить, чтобы сделать вокзал удобным и привлекательным для пассажиров. Одной из главных задач было сделать его способным справиться с растущим пассажирским потоком с побережья Черного моря. С этой целью, главный зал ожидания был расширен и теперь он вмещает до 6000 пассажиров.

Пассажирам предоставляются различные услуги: информационный центр, комнаты ожидания, ресторан, камеры хранения и т.д. Билетных касс такое количество, что пассажир может приобрести билет за несколько минут.

Ежедневно вокзал обслуживает 40000 пассажиров дальнего следования и 750000 пригородных пассажиров. Проектировщики предусмотрели различные платформы для пригородных и поездов дальнего следования.

### **Задание 3.6.3**

1. The track is the basic feature of a railway
2. But there must be also various kinds of buildings as well as tunnels, bridges, viaducts and other engineering structure.
3. Railway buildings being subjected to intensive vibration and noise, these factors should be taken into account at the initial stage of construction.
4. The outward appearance of railway stations was not of minor importance as steam traction with its attendant smoke and dirt having been replaced by diesel and electric traction, the problem of maintaining railway buildings was greatly facilitated.
5. The new materials we extensively use today for finishes also contribute to the attractiveness of railway stations.
6. On the one hand, its architectural design must be in line with the style of the surrounding buildings. On the other hand, however, strict limitations are imposed on any project of this kind by track lay out and other needs of railway of serve.

#### **4. Контрольно-измерительные материалы для итоговой аттестации по учебной дисциплине**

Предметом оценки являются умения и знания. Контроль и оценка осуществляются с использованием следующих форм и методов: практические занятия, устный ответ у доски, тестирование, самостоятельная работа, контрольные работы.

Оценка освоения дисциплины предусматривает использование накопительной / рейтинговой системы оценивания и проведение дифференцированного зачета; в зависимости от рейтингового балла студент может быть освобожден от написания зачетной работы.

##### **Назначение:**

Предназначен для контроля и оценки результатов освоения учебной дисциплины «Иностранный язык» по специальности 09.02.02 Компьютерные сети (*базовый уровень*) следующими умениями, знаниями, которые формируют профессиональную компетенцию, и общими компетенциями:

##### **Умения**

- У1. Общаться (устно и письменно) на иностранном языке на профессиональные и повседневные темы;
- У2. Переводить (со словарем) иностранные тексты профессиональной направленности;
- У3. Самостоятельно совершенствовать устную и письменную речь, пополнять словарный запас.

##### **Знания**

- З1. Лексический (1200-1400 лексических единиц) и грамматический минимум, необходимый для чтения и перевода (со словарем) иностранных текстов профессиональной направленности.

## II. ЗАДАНИЯ ДЛЯ ДИФФЕРЕНЦИАЛЬНОГО ЗАЧЕТА

**Время выполнения задания – 45 мин.**

**Условия:**

**а) Вид и форма дифференцированного зачёта:** контрольная работа

**б) Количество заданий для студента:**

- грамматический тест состоящий из 20 вопросов

- профессионально ориентированный текст

- разговорные темы

**в) Проверяемые результаты обучения и критерии оценок:**

- умеет общаться (устно и письменно) на иностранном языке на профессиональные и повседневные темы;

- умеет переводить (со словарем) иностранные тексты профессиональной направленности;

- владеет знаниями и имеет практические навыки в образовании и употреблении: видо-временных форм английского глагола, множественного числа и притяжательного падежа существительного, местоимений, степеней сравнения прилагательных и наречий, артиклей, модальных глаголов, неличных форм глаголов, косвенной речи.

- владеет необходимым лексическим материалом, умеет распознавать, переводить и употреблять в речи изученный грамматический материал.

### RAILWAYS

We usually think of railways as a means of travel. It is true that railways are often used for travel, but their most important function is to carry freight.

Railways play a very important part in the national economy of a country because the economic and political development of a country depends on a wide network of transportation systems. Although we have now faster and more modern means of communication and transport, railways are still the safest and the most popular means of transportations.

The early railways were not like the railways we have today. The very first railways used horses for drawing train. They were put into operation for transporting such products as coal, ore

and timber. Later on, the horse railways were used for passenger transport in large cities. But these railways did not last long.

One of the first attempts to use the steam engine for hauling passenger and freight trains was made in 1808 by Richard Trevithick, an Englishman, who demonstrated his working model in London. For a shilling the public could travel in a carriage drawn by a steam engine. The speed of this locomotive was 12 mph. It was called "Catch-me who-can".

## THE RAILROAD TRACK

The track is one of the basic features of a railway. It is also called the permanent way. The fact is that in the early days of railroad building the workers first had to lay temporary tracks to transport the materials to the construction site. And only after that they laid down the permanent tracks or the permanent way, as it was called. The permanent way consists of rails, ties and ballast.

The railroad track of today is quite different from that used in the early days of railways. The first tracks had no ballast, the rails were made of wood. Then the wooden rails were replaced by iron ones. The discovery how to make cheap steel was of great importance to the railways for, when placed in the same track, steel rails had a life 15 times as long as iron rails.

The distance between the rails is called the gauge. The standard gauge in most countries is 1,435 mm while in Russia the railroads have a gauge of 1,524 mm. That gauge was finally adopted when the first mainline Moscow-St. Petersburg railway was under construction (1842-1851). Thus, Russia was the world's first country where the uniform gauge was adopted for all railways. In America the gauge was unified in 1886.

## UNDERGROUND RAILWAYS

The underground railways as a kind of city transport appeared in the second half of the 19th century. The first underground system was proposed for London by Charles Pearson in 1843. But most people criticized the project. It was spoken of as, a fantasy. Indeed, when constructed, the Metropolitan line, as it was called, was not a success. It was a short distance railway, only a few miles in length, and Londoners went on traveling by surface transport as they feared to get deep under the ground. But this situation did not last long. Wishing to attract more passengers to underground railway Alfred Stanley, General Manager of the metropolitan line, filled the stations with flowers and wild animals in cages.

While traveling, however, public experienced many discomforts. The tunnels were made as small as possible in order to reduce construction costs. The coaches themselves were small and narrow. No wonder that people called this underground line a "sardine-box railway". The small windows in the trains were made in the roof so that passengers could see nothing. The oil and gas lamps used gave little light.

## MONORAILS

One of the new ideas and inventions put forward in the last quarter of the 19<sup>th</sup> century was the idea of the monorail railroad. This idea was laughed at by many, but some people believed that it was promising. If monorails are built above the ground, they occupy very little space; so

one of the monorail's advantages is the economy or saving of space. In designing a monorail the engineer must solve important problems – instability, noise, structural design, etc.

One of the first monorails appeared in 1882 when Brennan, an Irishman, built an experimental monorail car. The inventor designed his car as a military vehicle for the speed at which a single rail could be laid made it ideal for military purpose. According to Brennan, these cars were to be worked by steam, petrol, or electricity.

In 1897, the Russian technical society organized in Petersburg a demonstration of working models. One was the first suspended electric monorail designed by engineer Ippolit Romanov. The demonstration of a small car powered by a miniature motor was a success.

## ЗАДАНИЕ 2.

### Из истории железных дорог.

Мы обычно считаем железные дороги средством передвижения. Это правда, что железные дороги часто используются для передвижения, но их самая важная функция-перевозка грузов. Железные дороги играют очень важную роль в национальной экономике страны, т. к. экономическое и политическое развитие страны зависит от широкой сети транспортной системы. Хотя, у нас сейчас есть более быстрые и современные средства связи и передвижения, железные дороги все еще являются самым безопасным и популярным средством передвижения.

Первые железные дороги не были похожи на железные дороги, которые есть сейчас. Самые первые железные дороги использовали лошадей для того, чтобы тянуть поезда и были пущены в эксплуатацию для перевозки таких грузов, как уголь, руда, и лес. Позже использовались железные дороги на лошадиной тяге в качестве пассажирского транспорта в больших городах. Но эти железные дороги не прослужили долго. Одна из первых попыток использовать паровой двигатель, чтобы тянуть пассажирские грузовые поезда была сделана в 1808 г. Ричардом Тревитиком, англичанином, который продемонстрировал свою рабочую модель в Лондоне. За шиллинг публика могла прокатиться в вагоне, который тянул паровой двигатель. Паровоз называли «Догони меня, кто сможет»

### Железнодорожный путь.

Путь-одна из основных составляющих железной дороги. Его также называют верхним строением пути. Дело в том, что в самом начале железнодорожного строительства рабочие с начала должны были прокладывать временные пути, чтобы перевозить материалы к месту строительства. И только после этого они прокладывали постоянные пути или железнодорожное полотно как оно было названо. Железнодорожное полотно состоит из рельсов, шпал, и балласта.

Современный железнодорожный путь совершенно отличается от того, который был в самом начале железнодорожного строительства. Первые пути не имели балласта, рельсы были сделаны из дерева и покоились на тяжелых гранитных блоках. Затем деревянные заменили на железные, а гранитные блоки были заменены деревянными шпалами. Такой путь, однако, не был достаточно прочным для тяжелых паровозов. Открытие производства дешевой стали было очень важным для железных дорог, т.к., уложенные на одном и том же пути стальные рельсы служили в 15 раз дольше, чем железные.

Расстояние между рельсами называется колеей. Стандартная ширина колеи в большинстве стран 1435 мм, тогда как в нашей стране железные дороги имеют колею 1524 мм. Такая ширина колеи была окончательно принята, когда строилась железная дорога Москва-Санкт-Петербург (1842-1851). Таким образом, Россия была первой в мире страной, где была принята единая колея для всех железных дорог. В Америке единая колея была принята только в 1886 году.

### Подземные железные дороги.

Подземные железные дороги как вид городского транспорта появились во второй половине 19 века. Первая подземная система была предложена для Лондона Чарльзом Пирсоном в 1843 году. Но большинство людей критиковало проект. О нем говорили как о фантастике. На самом деле, когда построили линию Метрополитена как ее называли, она не пользовалась успехом. Это была железная дорога короткого расстояния, только несколько

миль в длину и лондонцы продолжали ездить наземным транспортом, т.к, они боялись спускаться глубоко под землю. Но такая ситуация не продолжалась долго. Желая привлечь больше пассажиров к подземной железной дороге, Альфред Стенли, генеральный управляющий линии Метрополитена, наполнил станции цветами и дикими животными в клетках.

Во время передвижения, однако, народ испытывал много неудобств. Туннели были сделаны на столько маленькими на сколько это было возможно, чтобы сократить стоимость строительства. Сами вагоны были маленькими и узкими. Неудивительно, что люди называли эту подземную линию «банка с сардинами». Маленькие окошки в поездах были сделаны в крыше и поэтому пассажиры ничего не видели. Масляные и газовые лампы давали мало света. Таким образом, пассажиры, желающие почитать во время поездки, должны были брать с собой свечи. практиковаться.

#### Монорельсовые железные дороги.

Одна из новых идей и изобретений, выдвинутых в последней четверти 19 века была идея о монорельсовой железной дороге. Эта идея была осмеяна многими, но некоторые люди считали её перспективной.

Одна из первых монорельсовых железных дорог появилась в 1882 году, когда Л. Бренан, ирландец, построил экспериментальный монорельсовый вагон. Изобретатель спроектировал свой вагон как военное транспортное средство, т. к, скорость, с которой мог прокладываться одиночный рельс, делало его идеальным для военных целей. Согласно Бренану, эти вагоны должны были работать на паре, бензине или электричестве. В 1897 году Русское техническое общество организовало в Петербурге показ рабочих моделей. Одна из них была первой электрической монорельсовой дорогой подвешного типа, изобретенная Ипполитом Романовым. Показ маленького вагона, работающего на миниатюрном моторе, был успешным.

### III КРИТЕРИИ ОЦЕНКИ

---

Контрольная работа состоит из трех заданий. Выполнение каждого задания оценивается отдельно. Окончательно выставляется среднеарифметическая оценка.

#### Задание 1.

#### Критерии оценки знания лексического и грамматического материала.

<i>Оценка</i>		<i>Критерии: правильно выполненные задания</i>
5	«отлично»»	от 85% до 100%
4	«хорошо»	от 75% до 85%
3	«удовлетворительно»	от 61% до 75%
2	«неудовлетворительно»	до 61%

#### Задание 2

### Критерии оценки письменных переводов.

Баллы	Критерии оценки
«5»	Поставленная задача решена полностью, перевод лексики адекватно коммуникативной задаче, грамматические ошибки либо отсутствуют, либо не препятствуют передачи основного содержания текста.
«4»	Коммуникативная задача решена полностью, но были допущены незначительные лексические и грамматические погрешности при переводе.
«3»	Коммуникативная задача решена, но при переводе допущены грубые лексические и грамматические ошибки.
«2»	Коммуникативная задача не решена ввиду большого количества лексико-грамматических ошибок или недостаточного объема текста.

### Задание 3

#### Критерии оценки устных развернутых ответов.

Оценки	Коммуникативное взаимодействие	Произношение	Лексико-грамматическая правильность речи
«5»	Адекватная естественная реакция на реплики собеседника. Проявляется речевая инициатива для решения поставленных коммуникативных задач.	Речь звучит в естественном темпе, учащийся не делает грубых фонетических ошибок.	Лексика адекватна ситуации, редкие грамматические ошибки не мешают коммуникации.
«4»	Коммуникация затруднена, речь учащегося неоправданно паузирована	В отдельных словах допускаются фонетические ошибки (например замена, английских фонем сходными русскими). Общая интонация в большой степени обусловлена влиянием родного языка.	Грамматические и/или лексические ошибки заметно влияют на восприятие речи учащегося.
«3»	Коммуникация существенно затруднена, учащийся не проявляет речевой инициативы.	Речь воспринимается с трудом из-за большого количества фонетических ошибок. Интонация обусловлена влиянием родного языка.	Учащийся делает большое количество грубых грамматических и/или лексических ошибок.

г) *Время выполнения каждого задания:*

- 1.1 – тестирование – 1 минута – на 1 задание;
- 1.2 – работа с текстом – до 30 мин.
- 1.3 – беседа с преподавателем по теме – 5-7 минут
